*The daily life of people living with rare diseases:
Results of the latest Rare Barometer survey*

February 13, 2025
17.00-18.30 CET

Join us in exploring the results from the latest Rare Barometer survey on the social impact of living with a rare disease!

Close to 10,500 people participated in the survey worldwide, and almost 9600 in Europe. The results will include key figures on disability among people with rare diseases and will highlight the barriers that prevent people living with a rare disease from accessing adequate support and equal opportunities to live to their full potential, as well as having their disabilities recognised.
