

An insight into the participation of patients affected by a rare respiratory disease in research

30 million people are living with a rare disease in Europe and 300 million worldwide

No cure for the vast majority of diseases and few treatments available

187 patients and their families affected by a rare respiratory disease responded to the survey, conducted in 23 languages across 42 countries worldwide

Key findings of a Rare Barometer Voices survey on the participation of patients affected by a rare respiratory disease in research:

What type of research do patients participate in?

1/3

of patients affected by a rare respiratory disease have participated in medical research, among them:

59% to develop treatments & therapies

44% in research on quality of life

10% to develop genetic therapies

Top 3 obstacles to rare disease research

Lack of public funding 

Lack of private funding 

Small patient population 

Rare Barometer Voices is a EURORDIS-Rare Diseases Europe online survey initiative. It brings together over 8,000 patients, carers and family members to make the voice of the rare disease community stronger.
